

ML Series RE16

Our new ML Series exemplifies this philosophy in introducing a value-priced line that incorporates designs featuring precision-cut, pre-finished low-pressure laminate panels assembled with dadoed joinery to create quality product at a most affordable price point. If your equipment needs to be mobile within your facility, there is no better solution than one of our ML Series rack enclosures to safely secure your equipment. Standard features include rack rails, a locking Euro-hinged door and front access panel that provide security, and casters which allow easy positioning. A cooling fan, additional venting, and power strip are some of the options from which to choose. The standard enclosure has a 16RU capacity; custom sizes are also available. Choose from Fusion Maple, Wild Apple, Serene Cherry, and Graphite Nebula LP laminates.
