

LT3 Floor Lectern

Combining presence and style in an aesthetically pleasing package that won't overwhelm a small room, the LT3 lectern bridges the gap between conventional floor lecterns and multimedia lecterns by incorporating many of the most sought after features as standard. A locking front access panel and rear door provide easy access without compromising security, with cable routing ports on both sides as well as underneath. Notes, binders, and other presentation materials are easily reached in a convenient built-in storage area. Casters are provided for room to room mobility. Available in eight standard hardwood veneers, all capped with matching rolled solid hardwood trim. Custom veneer finishes are also available.
